

Add the numbers.
Draw a circle round the
correct answer.

1.			5
			6
	1	+ 4	7

2.			7
			8
	5	+ 3	9

3.			5
			6
	3	+ 4	7

4.			3
			4
	2	+ 3	5

1401-02 Adding small numbers (pg 2)

Useful tip: These types of questions should be read or spoken and the answer written down. At this age a child's ability to add may well be better than his/her reading ability. To begin with there is no harm with having a number line available so that the child can find the number and then count on to get the answer.

Try these types of questions, beginning with numbers up to 5:

1. 4 add 3
2. Add 2 to 5
3. What is the sum of 3 and 1 ?
4. What is the total of 4 and 2 ?
5. How many are 4 and 5 altogether?
6. Which two numbers make 4?
7. Which three numbers make 5?
8. What is 3 more than 3 ?

Repetition of these types of question will rapidly improve children's recall of 0 to 9 number bonds. It is the basis of much that will follow and it is surprising how many older children - 11/12 year olds still have to use their fingers to answer single digit addition sums.

If your child finds writing the numbers down difficult, use 0 to 9 cards and ask them to pick up the card which gives the correct answer.
