## Wordsnake Y4 Data

This is a maze. Start at the arrow to find the first word, moving across or down (but not diagonally) like a snake. The word will not be in a straight line, but each letter is only used once.

The second word follows on immediately from the first, the third from the second, and so on until each letter has been used and the maze is exited at the arrow.

Write the words down below the maze. The number of dashes shows how many letters are in each word. The first word has been done for you and the initial letter of the next two words.
