### **Using triangles to make shapes**

A triangle has three sides...but,  
you can use two triangles to make  
shapes with different numbers of  
sides.  
Try it!

First of all try and make a 4 sided shape from two triangles.

This is called a quadrilateral.

How many quadrilaterals can you make? Draw them.

How many hexagons can you make from two triangles? Remember hexagons have six sides. Draw them below.
