

Hi! A tricky task here!

Can you put the ten digits into the ten boxes to make the very best possible solutions? Try to get as near to each target as you can!

You can only use each digit once!

0

3

4

5

6

7

8

9

Largest **even** number

Largest **odd** number

Smallest **odd** number

Largest **multiple of 5**

Number **closest to 30**

Can you find another way of doing this which is better?

How could you decide which was the best possible answer?
